

Short introduction to **Exeon.NDR**

Smart Network Detection & Response

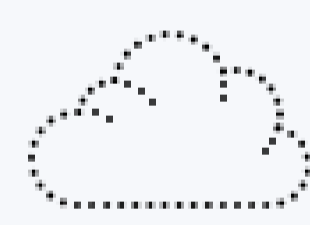

The Exeon.NDR Network Detection & Response (NDR) platform is the smart way to **strengthen cybersecurity**.

Powerful Machine Learning (ML) and proven algorithms provide complete visibility across the entire network, automatically detect suspicious behavior and support the respective security team to efficiently assess and combat early-stage cyber threats.

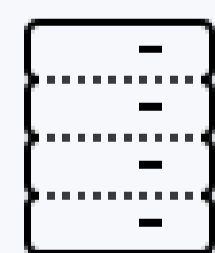

Why Exeon.NDR

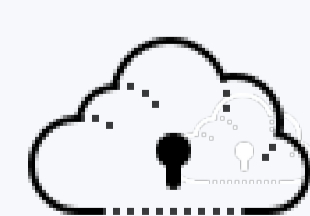

Exeon.NDR offers **holistic visibility** into IT/IoT/OT network communications to identify and respond to cyber threats quickly and effectively

As it relies on the **analysis of network log data**, Exeon.NDR is not affected by encrypted network traffic

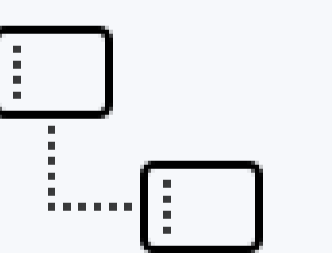

Exeon.NDR is specialised in **protecting cloud**, on-premise or hybrid network environments

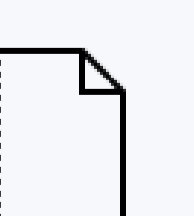

Exeon.NDR leverages and augments the existing cybersecurity infrastructure (**firewalls, SIEM** etc.) and completely runs within your network or cloud (**full data control**)

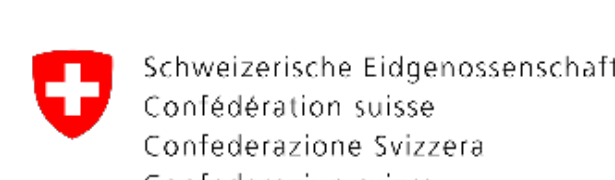

Exeon.NDR can be virtually deployed, is **compatible with leading network device vendors** and easily integrable into the existing cybersecurity infrastructure

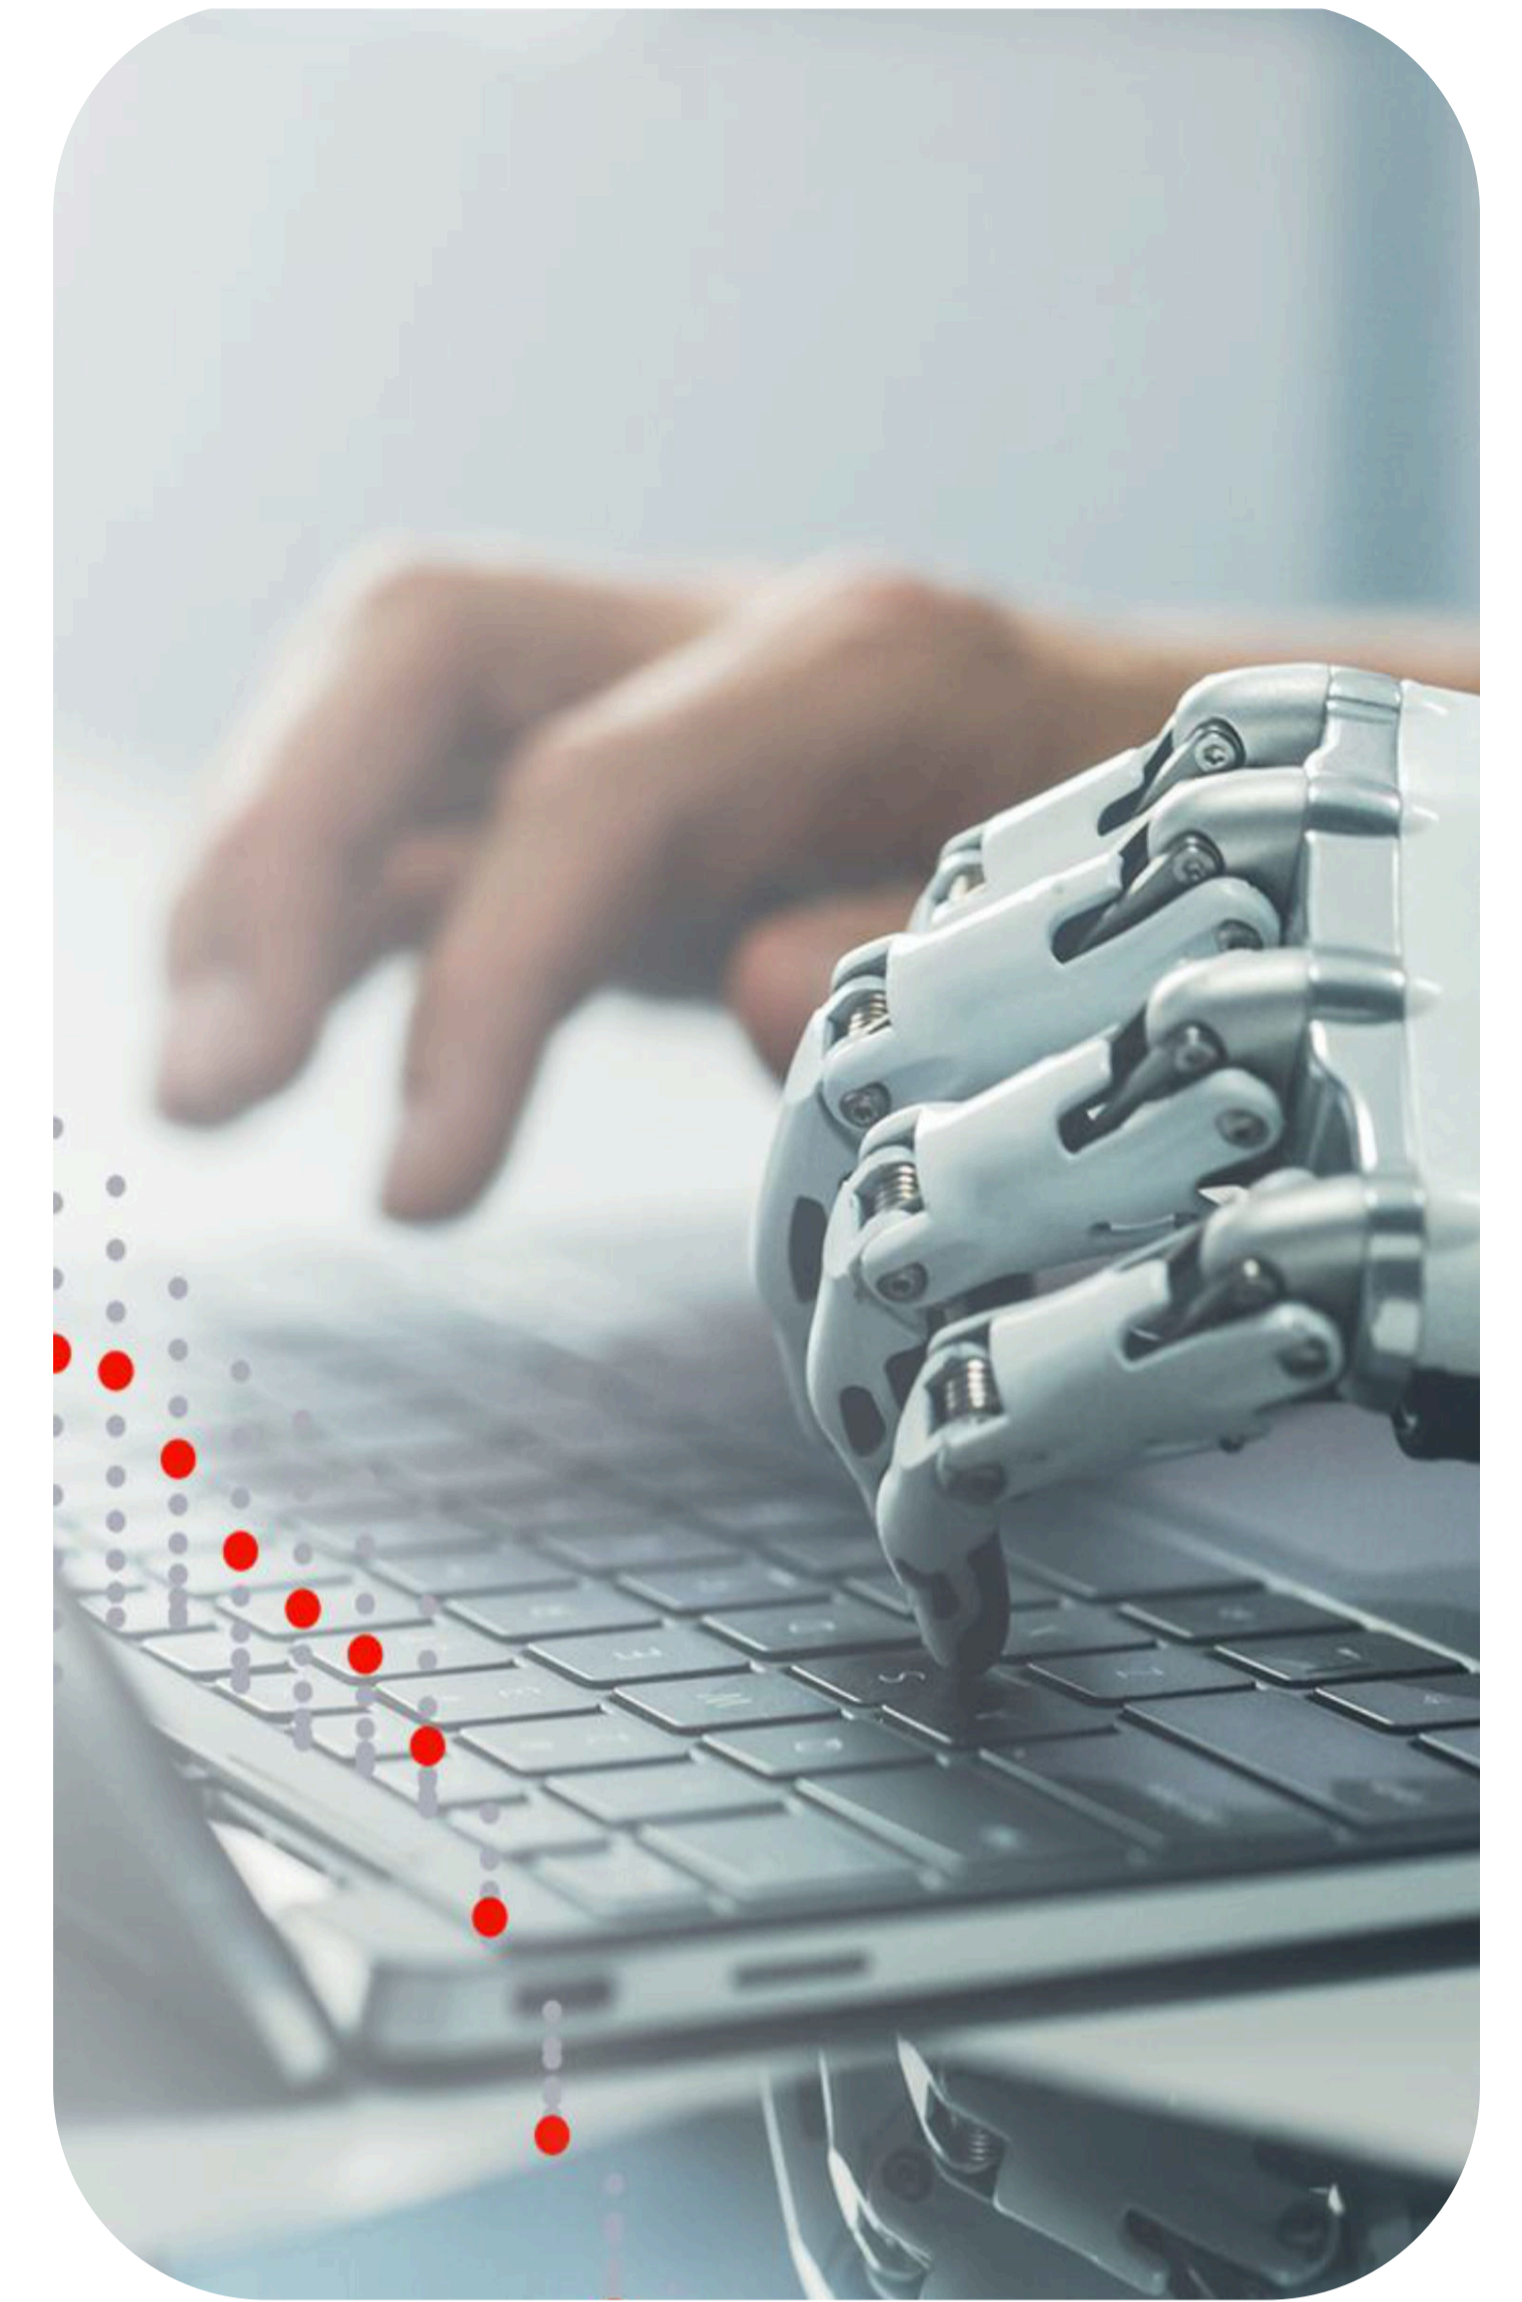

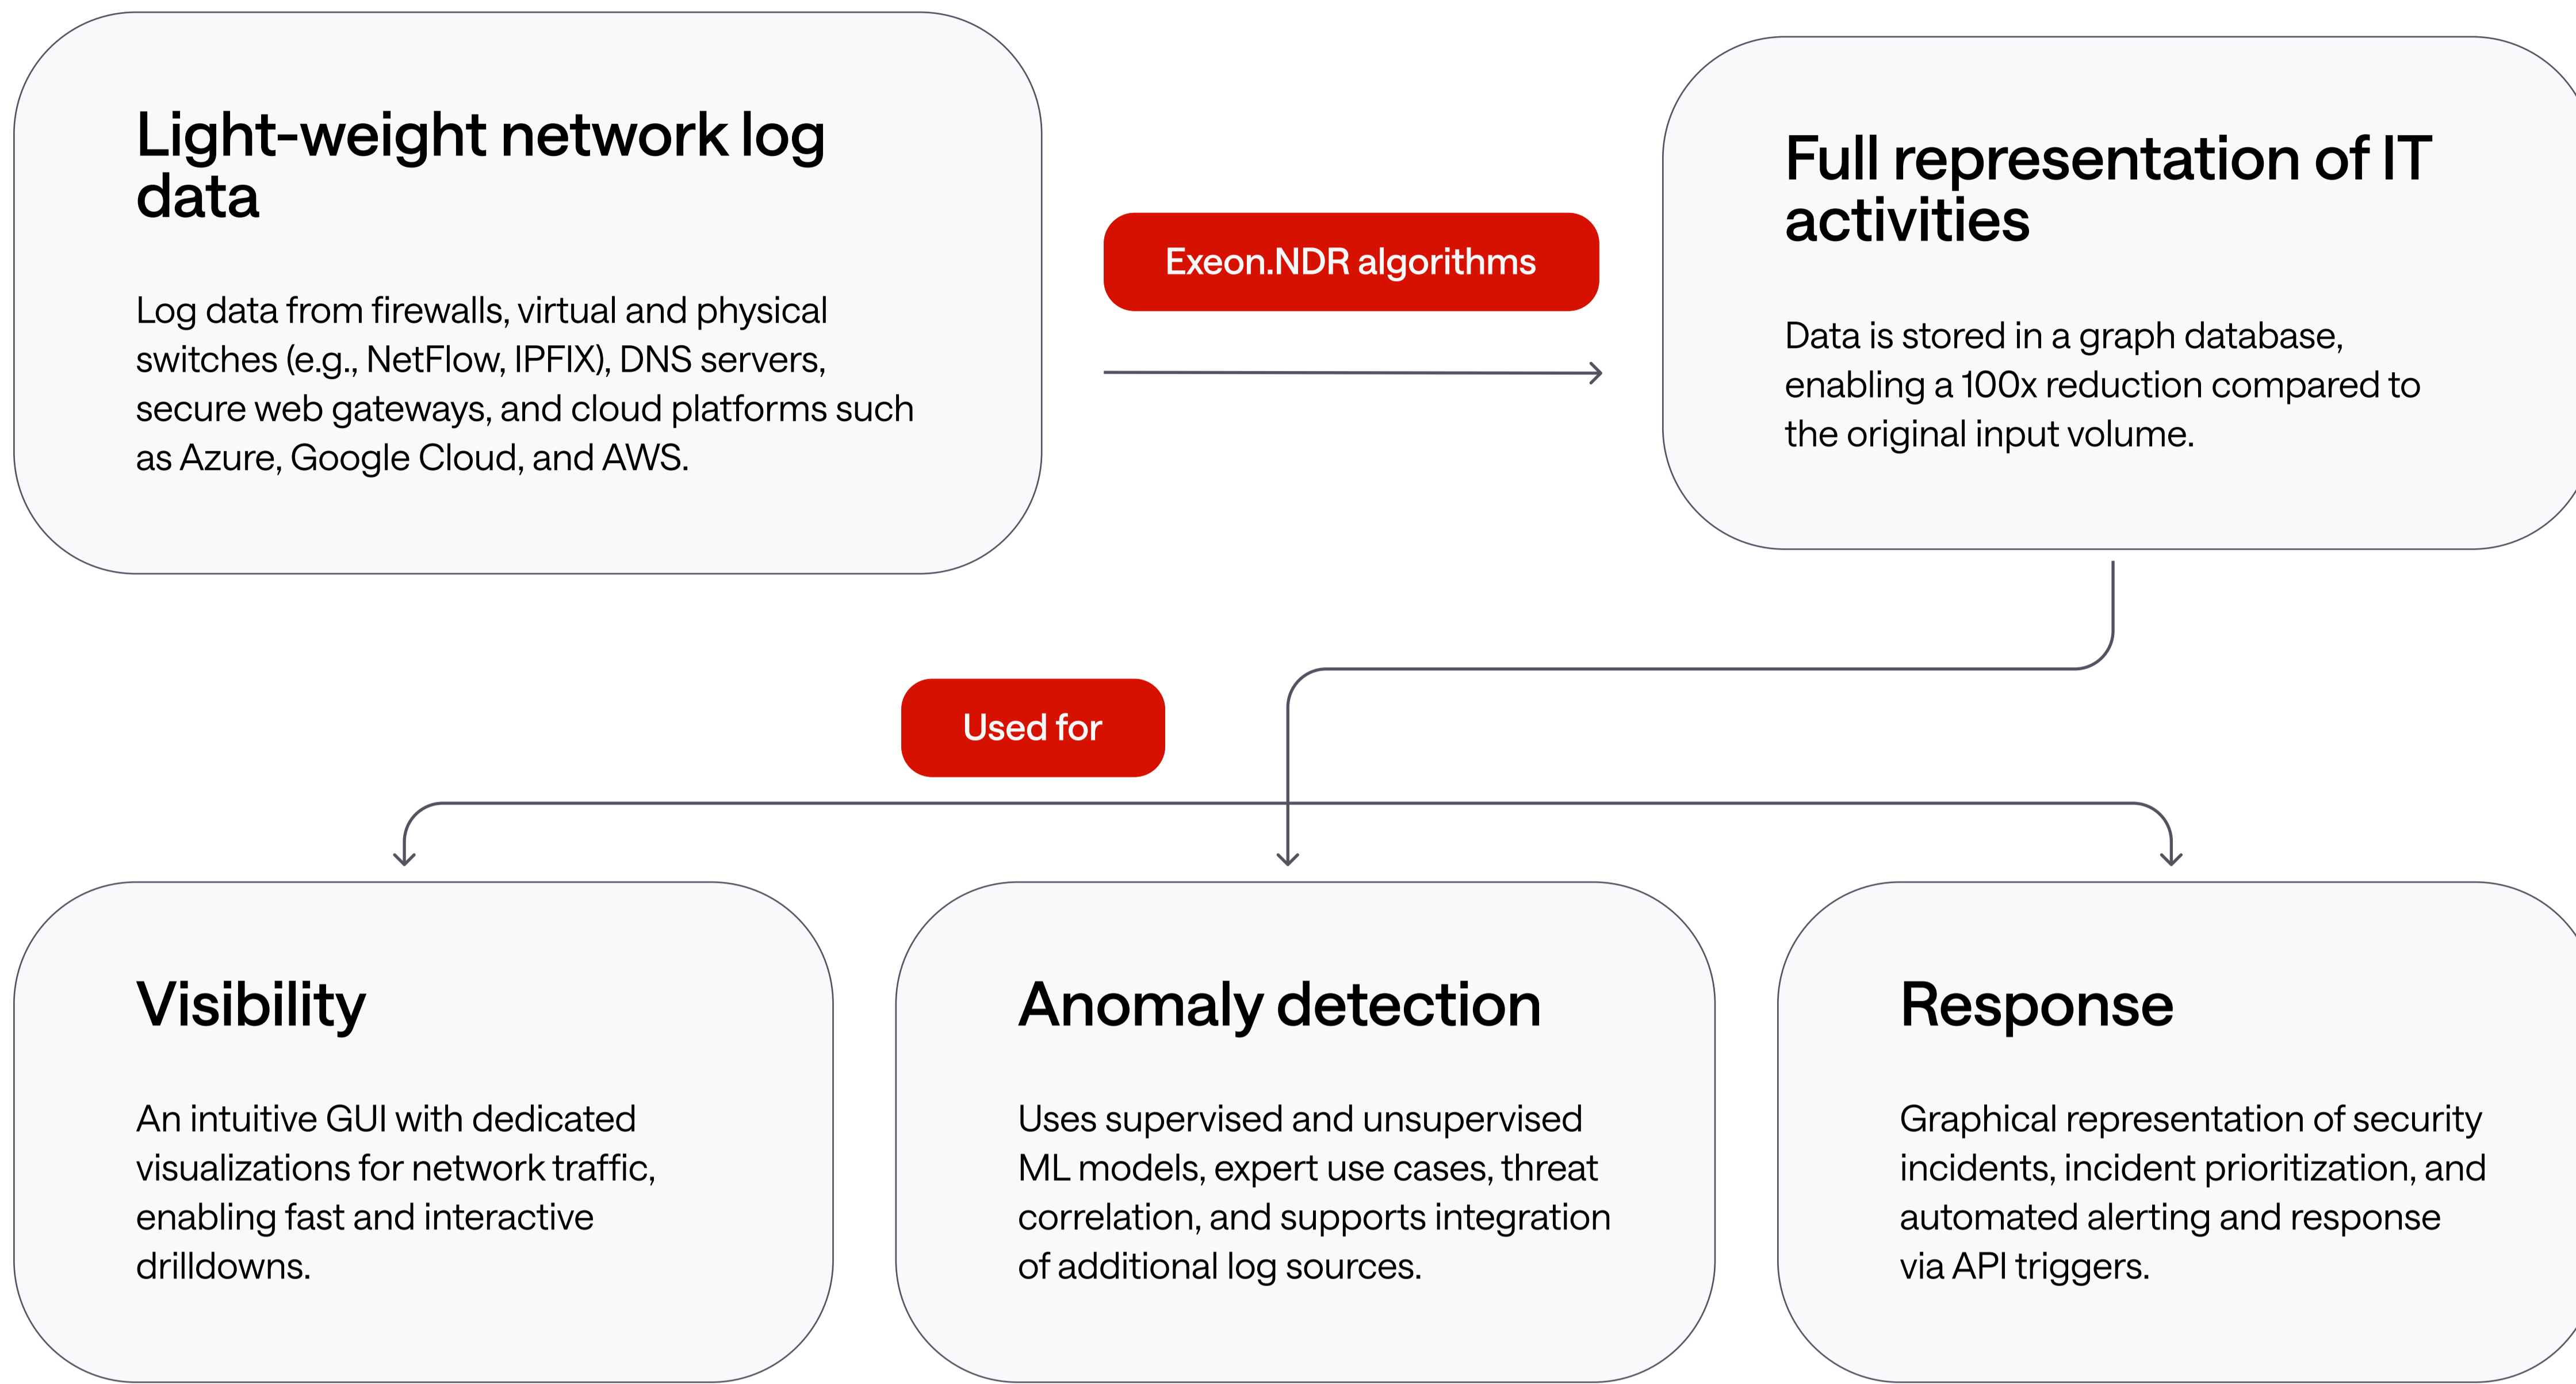

Exeon is a Swiss vendor, based on more than a decade of **academic research at a leading European technical university** (ETH Zurich)

Trusted by

How Exeon.NDR works

Detection

The alarm system for your network

Immediate detection of cyber threats such as advanced persistent threats (APTs), ransomware, supply chain attacks, or data leaks from exposed, insecure systems. Powerful detection, even for threats that span multiple data sources.

Visibility

Network data flows easily understood

With **unique and intuitive visualizations**, large and complex networks can be instantly monitored and easily understood. Incidents are detected early, and the IT, IoT & OT security posture is strengthened without disrupting ongoing, critical business processes.

Response

Efficient investigation of security incidents

Security alerts can be handled faster and better by immediately displaying all relevant information. Our algorithms **minimize false alarms** and automatically prioritize incidents by threat level. Security teams save crucial time in security operations and reduce workload.
